

**HOLOGATE 70****HOLOSCREEN****HOLOGATE HSI 70 P INTERACTIVE**

The HoloGate 70 Interactive HoloScreen presentation system is the first vertical HoloScreen presentation solution from MediaScreen.

The transparent HoloGate 70 Interactive contains an accurate multi-touch surface and was developed for the holographic presentation of interactive content on exhibitions, events, showrooms and POS.

The content is projected by the integrated and barely perceptible Ultra Short Throw projector with 3.000 ANSI lumens and WXGA resolution directly to the vertically aligned HoloScreen.

In addition, the All-in-One Presentation system was equipped with a powerful multimedia PC for easy, local content playback.

Furthermore, the visual content presentation can be optionally supplemented acoustically with a powerful Yamaha® sound system. To avoid an unwelcome constant acoustic irradiation the system was equipped with a sensitive motion sensor.

The integrated LED lighting can be colored in each client corporate design and completes the aesthetic and futuristic atmosphere of the HoloGate 70 Interactive Systems.

The filigree design, combined with the attractive and contemporary HoloScreen look provides the perfect combination for a memorability product and content presentation.

**FEATURES & FUNCTIONS**

- Elegant design and high quality materials
- Integrated Ultra Short Throw projector
- Integrated multimedia PC with USB, LAN, WLAN
- Integrated Yamaha® Soundbar
- Integrated LED illumination
- Measurements: (LxWxH): 143 x 73 x 217 cm
- Further sizes and options on request
